**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 17,18,20-24,26-34,36 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pirila et al. (6417817 B1).

Regarding Claims 17,18,20-24,26-34,36 and 37, Pirila et al. show, for example in Figures 3-6, an antenna module formed on a housing 601 for a circuit (302 in Fig. 3 or 401 in fig. 4) having communication components (301 in fig. 3 or 402 in Fig. 4), disposed thereon comprising a housing element 407 (Fig. 4). For purposes of reading the claims on the structure, the following nomenclature is established: the upper and lower surfaces are shown in Fig. 4 as if the figure was inverted, so the antenna 410 is mounted on the lower surface of the element 407. The inner conductive layer/shield 404, 406 electrically connects to the antenna 410 and is configured to form signal communication with the circuit board 401 at points 405. Although Pirila et al. do not specifically do not define the orientation of the elements as now claimed, it would have been obvious to the skilled artisan to arrange the elements as set forth herein, because such arrangement is a mere change in direction of elements or orientation of the layered structure that does not effect operation of the portable communication device.

Art Unit: 2821

As to Claim 20,21,26,27,36 and 37, connectors 411,412 are shown, and it would have been obvious to the skilled artisan to form them as vias or metallized holes when the layered structured is filled with or formed on dielectric substrates. Such an arrangement is obvious to the skilled artisan in the Figure 8 embodiment.

***Allowable Subject Matter***

3. Claims 1-12 and 14-16 are allowed.

***Response to Arguments***

4. Applicant's arguments filed August 26, 2003 have been fully considered but they are not persuasive. Specifically, applicant's arguments appear to be primarily directed to "health reasons" as to why the elements are arranged as they are in the claims. However such concern is not at issue in the structure that forms the invention. The invention may be used in any configuration of radiation with respect to antenna and housing. All structure is set forth as claimed. The rejection stands.

***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
